

FOR IMMEDIATE RELEASE

A new pulseless disposable pump running on Masterflex L/S Drives has been launched by Swissinnov Product.

Gland, Switzerland, January 2016

Swissinnov Product a specialized firm in innovative pump system recently launched a pulseless dosing pump compatible with Masterflex L/S drives, the “**NaoStedi**”. This unique pump serves multiple applications in pharmaceutical, medical, laboratory, chemical and industrial markets.

The “**NaoStedi**” pump delivers outstanding performances in dosing accuracy, flow control and is a new and fairly easy to use alternative to traditional peristaltic, diaphragm and syringe pumps. “**NaoStedi**” pump head can be sterilized and integrated as OEM component in any devices using pump system. The “**NaoStedi**” pump functions with reciprocating pistons driven independently over the pumping cycles to ensure a constant flow delivery. The “**NaoStedi**” pump delivers pulseless flow without a need for a calibration or flow sensor.

For an immediate evaluation of the “**NaoStedi**”, a starter Kit comprising of a pump holder mounted in 5 minutes on the Masterflex L/S drives and 3 pump heads is available online at www.naopump.com.

The Starter Kit is designed for a comprehensive testing of the “**NaoStedi**” on existing systems running Masterflex L/S drives. Any specific requirements can be reviewed by Swissinnov Product.

Swissinnov Product provides consulting services for custom designs and personalized solution. Swissinnov Product has long track record in developing innovative pumping system and solving complex fluidic problems. Its team of experts works constantly to provide new and unique pumping systems for demanding applications.
